

Data Health Score

Score: 100/100

Data health is 100/100; all monitored checks passed and no critical violations reduced the score.

Violations this Week

Counts by severity: CRITICAL=0, HIGH=0, WARNING=0, LOW=0

- No severity-bearing violations were detected in the current reporting window.

Schema Changes Detected

- No schema changes were observed in the past 7 days.

AI System Risk Assessment

AI systems are currently consuming reliable data; embedding drift is within threshold and the LLM output schema violation rate is stable.

- Embedding drift: score=0.0327 threshold_ok=True
- Output schema violation rate: 0.0 trend=stable
- Prompt input validation: status=PASS invalid_records=0

Recommended Actions

- Update repos/week2/src or the Week 2 verdict producer to emit prompt_version so output schema violation rate can be tracked per prompt version instead of falling back to rubric_version.
- Update repos/week3/src to persist a canonical source_path alongside Week 3 extraction outputs so prompt input validation no longer relies on derived fallback metadata.
- Run contracts/schema_analyzer.py for every contract snapshot directory on a scheduled cadence and feed the resulting schema_evolution_*.json outputs into contracts/report_generator.py before each release handoff.
