

Data Health Score

Score: 100/100

Data health is 100/100 after 87 of 87 checks passed, with 0 critical violations lowering trust in downstream data use.

Violations this Week

Counts by severity: CRITICAL=0, HIGH=3, WARNING=0, LOW=0

- Week7 Breaking Demo failed on field amount: Field amount changed from nullable to required; no registered downstream consumers were identified.
- Week7 Breaking Demo failed on field amount: Change numeric constraints for amount from [0.0, 100.0] to [10.0, 50.0]; no registered downstream consumers were identified.
- Week7 Breaking Demo failed on field amount: Change type for amount from number to integer; no registered downstream consumers were identified.

Schema Changes Detected

- week7-breaking-demo: Field amount changed from nullable to required. Verdict=BREAKING. Action: Coordinate with all producers. Provide default or migration script. Block deploy until all producers updated.
- week7-breaking-demo: Change numeric constraints for amount from [0.0, 100.0] to [10.0, 50.0]. Verdict=BREAKING. Action: Coordinate a migration window and confirm all subscribers can tolerate the narrower value range before deployment.
- week7-breaking-demo: Change type for amount from number to integer. Verdict=BREAKING. Action: CRITICAL. Requires migration plan with rollback. Registry blast radius report mandatory. Statistical baseline must be re-established after migration.

AI System Risk Assessment

AI systems are currently consuming reliable data; embedding drift is within threshold and the LLM output schema violation rate is stable.

- Embedding drift: score=0.0327 threshold_ok=True
- Output schema violation rate: 0.0 trend=stable
- Prompt input validation: status=PASS invalid_records=0

Recommended Actions

- Update outputs to restore field amount to the expected shape required by contract week7-breaking-demo.
- Update repos/week2/src or the Week 2 verdict producer to emit prompt_version so output schema violation rate can be tracked per prompt version instead of falling back to rubric_version.
- Update repos/week3/src to persist a canonical source_path alongside Week 3 extraction outputs so prompt input validation no longer relies on derived fallback metadata.
